

# EDphone Moodle server running in a smartphone

[thierry.coilhac@ed4free.org](mailto:thierry.coilhac@ed4free.org)

Raspberry Pi

# EDphone, how

 **debian os**, ARM, build with debootstrap by Linux Deploy, Customized to be compliant with Raspberry OS environment, with symlinks pointing to common conf files. Launched in a Chroot by Linux Deploy

**Applicative servers**, environment created on Raspberry Pi

Both Debian OS and Applicative server environment can be stored :  
- in a external SD card, the same one used in the Raspberry Pi.  
- in the internal storage, copied from the Raspberry SD card.

# EDphone, why

## Which Use Case

- To equip teachers and trainers in developing countries where internet is not available or too expensive
- With the EDphone, they always have their own educational server with them, for:
  - Make courses
  - Allows their students to download their courses and others contents.

## Which Potential

- EDphone works perfectly on recycled smartphone
- With 10,000 second-hand smartphones donated by a company, we can equip 10,000 teachers or 10,000 schools
- They will benefit 1 million end users (100 user per EDbox)
